

## Everything You Need to Patch the OS, VMware and Third-Party Applications

Updating software is now commonplace in the IT industry and many believe it's a "solved" problem. Yet plenty of organizations still struggle to keep systems up-to-date, especially with software updates outside of the OS. Shavlik® Protect keeps your systems current with the latest software updates for every Windows machine in your organization.

### EASY PATCH MANAGEMENT ACROSS THE ENVIRONMENT

Shavlik Protect patches the data center, client workstations, and virtual environments from a single, easy-to-use solution. Protect gives you patching support for the OS and hundreds of the most popular vendors, including Apple (iTunes), Oracle (Java), Adobe (Flash, Reader), and more.

Shavlik Protect discovers and patches client systems easily either with or without an agent. Enabling the Cloud Agent feature patches even those systems that don't connect regularly to the corporate network.

The solution also has powerful features for the data center, including agentless patch management and support for virtual environments. Patch online and offline virtual machines, discover and inventory virtual machines, update templates and snapshots before they come online, and even patch the Hypervisor with the product's deep integration into VMware.

Shavlik Protect offers several options to deliver software updates and ensure patch compliance across the entire organization whether the system is on the network or disconnected:

- ▶ Use the agentless features to reduce the footprint on physical and virtual servers
- ▶ Use the agent for on-premise systems that may need additional permissions or network configurations
- ▶ Use the cloud-based agent to patch remote offices or remote workers not always on the corporate networks

### DECREASE RISK, INCREASE SECURITY AND BE COMPLIANT

Eighty-six percent of reported vulnerabilities lie outside the OS stemming from third-party applications.<sup>1</sup> Shavlik Protect patches both the OS and third-party applications in a single patch management solution. With complete patching automation organizations can decrease dramatically the delivery time of critical security patches.

In order to be compliant, you must first know what you have. Shavlik Protect finds connected systems and scans for missing patches throughout the enterprise to help keep the organization compliant.

You can also gain in-depth information about the risks in your environment. Reporting options let you view reports to see the most vulnerable systems or get an overall view of the environment. Share patch status with other groups and executives and verify patch compliance quickly.

*Any Patch, Anywhere*

## SIMPLIFY AND AUTOMATE THE PATCHING PROCESS TO SAVE TIME AND MONEY

Shavlik Protect accelerates the software update process from months to minutes. It simplifies the installation and configuration and uses powerful discovery and deployment features. This means you no longer need to rely on time-robbing manual steps to discover and define software update packages, saving you time.

Through an intuitive, "single pane of glass" interface you gain granular, accurate control of the entire patching process, including reporting, patch discovery, and distributing software updates. What's more, you can continuously scan and deploy all available patches to your environment with flexible scheduling and customization.

The solution's ease of use and complete automation frees IT to concentrate valuable resources on initiatives that drive the business.

Presbyterian Church USA reduced the time to update PCs from 8 to 10 days to 4.5 hours.

"Shavlik helps us do more with less so we have time for other projects and helping our employees stay productive."

## FEATURES

### ► Comprehensive patch management

- Automated deployment of OS and third-party patches; for a current list of third-party application updates, please visit: <http://www.shavlik.com/support/supported-products-protect/>
- Agentless or agent patch deployments
- Support for custom application patches
- Precise reboot options

### ► Ease of use

- Intuitive interface
- Manage all assets from a single pane of glass
- Comprehensive and flexible reports and dashboards
- Customized report views
- On-network agent

- Cloud-based agent for off-network management
- Execute the most common IT functions with ITScripts
- **Virtualization support**
  - Patch online and offline virtual machines
  - Patch templates before they go online
  - Take snapshots before patching for improved rollback
  - Get VM information directly from VMware vCenter
  - Patch Hypervisors, including VMware ESXi, Windows Hyper-V, Citrix Xenapp, XenDesktop, and Presentation Server
- **Flexible infrastructure**
  - Support for role-based administration
  - Support for multiple configurations, including on-network and off-network patching, multiple distribution servers, and most network configurations
- **Advanced features – Shavlik Protect Advanced features everything in the Protect Standard solution plus these additional capabilities:**
  - Antivirus + Antispyware
  - Power Management
  - Custom IT Scripts
